International Journal for
Numerical Methods in Engineering

Volume 57 Number 1 • 7 May 2003

Voronoi cell finite difference method for the diffusion operator on arbitrary unstructured grids: N. Sukumar 1

Unequally spaced non-periodic B-spline finite strip method: C.-K. Choi, H.-S. Hong and K.-H. Kim ... 35

Crack identification of a planar frame structure based on a synthetic artificial intelligence technique: M.-B. Shim and M.-W. Suh 57

A new fixed-point algorithm for hardening plasticity based on non-linear mixed variational inequalities: P. Venini and R. Nascimbene 83

Non-local boundary integral formulation for softening damage: J. Sládek, V. Sládek and Z. P. Bažant 103

An arbitrary Lagrangian Eulerian finite-element approach for fluid–structure interaction phenomena: E. Kuhl, S. Hulshoff and R. de Borst 117

Volume 57 Number 2 • 14 May 2003

Explicit calculation of smoothed sensitivity coefficients for linear problems: R. A. Białecki, E. Divo, A. J. Kassab and R. Ait Maalem Lahcen 143

A practical determination strategy of optimal threshold parameter for matrix compression in wavelet BEM: K. Koro and K. Abe 169

A two-grid method for expanded mixed finite-element solution of semilinear reaction–diffusion equations: Y. Chen, Y. Huang and D. Yu 193

DSC solution for flow in a staggered double lid driven cavity: Y. C. Zhou, B. S. V. Patnaik, D. C. Wan and G. W. Wei 211

Meshless local boundary integral equation method for 2D elastodynamic problems: J. Sladek, V. Sladek and R. Van Keer 235

A two-dimensional BEM/FEM coupling applied to viscoelastic analysis of composite domains: A. D. Mesquita and H. B. Coda 251

On the computation of design derivatives for Huber–Mises plasticity with non-linear hardening: K. Wisniewski, P. Kowalczyk and E. Turska 271

The *International Journal for Numerical Methods in Engineering* is covered by the following abstracting and indexing services:

Applied Mechanics Reviews, BHRA Fluid Engineering Centre (Elsevier), Cambridge Scientific Abstracts/Materials Information, CompuMath Citation Index® (ISI), Current Contents®/Engineering, Computing & Technology (ISI), Earthquake Engineering Abstracts (NISEE), Ei COMPENDEX PLUS, Ei Page One, Geobase (Elsevier), Geotechnical Abstracts (Geotext Services), Indian Society of Earthquake Technology Bulletin, INSPEC, International Aeronautical Abstracts & Database (AIAA), International Civil Engineering Abstracts (Emerald), International Petroleum Abstracts, ISI Alerting Services, Materials Science Citation Index (ISI), Mathematical Reviews, Mechanics, PASCAL Database (INIST), Science Citation Index Expanded (also known as SciSearch®) (ISI), Science Citation Index® (ISI), Shock & Vibration Digest (Sage), Tribology and Corrosion Abstracts, Zentralblatt für Mathematik/Mathematics Abstracts.

Volume 57 Number 3 • 21 May 2003

Designing materials with prescribed elastic properties using polygonal cells: A. R. Diaz and A. Bénard 301

An integrated, finite element-based process model for the analysis of flow, heat transfer, and solidification in a continuous slab caster: C. H. Moon and S. M. Hwang 315

Optimal modal reduction of vibrating substructures: P. E. Barbone, D. Givoli and I. Patlashenko 341

Simultaneous surface and tetrahedron mesh adaptation using mesh-free techniques: A. Rassineux, P. Breitkopf and P. Villon 371

Coarsening unstructured meshes by edge contraction: C. Ollivier-Gooch 391

Generalized Lagrange functions and weighting coefficient formulae for the harmonic differential quadrature method: T. C. Fung 415

Volume 57 Number 4 • 28 May 2003

A numerical model for the cyclic deterioration of railway tracks: A. S. J. Suiker and R. de Borst 441

An arbitrary Lagrangian–Eulerian finite element method for finite strain plasticity: F. Armero and E. Love 471

A collocation meshless method based on local optimal point interpolation: C. Zuppa and A. Cardona 509

A priori error estimator of the generalized-α method for structural dynamics: J. Chung, E.-H. Cho and K. Choi 537

Powerful FE approaches for Pochhammer's dispersion modelling: T. Mazúch 555

A wavelet-based method for solving discrete first-kind Fredholm equations with piecewise constant solutions: C. Sánche-Ávila and R. Sánchez-Reíllo 577

Volume 57 Number 5 • 7 June 2003

A spline strip kernel particle method and its application to two-dimensional elasticity problems: K. M. Liew, G. P. Zou and S. Rajendran 599

Three-dimensional viscous flow over rotating periodic structures: K.-T. Kim, R. E. Khayat and A. Pollet 617

Study of non-Fickian diffusion problems with the potential field in the cylindrical co-ordinate system: H.-T. Chen and K.-C. Liu 637

Fatigue control of thin-walled structures: A. Tesar 653

An algorithm using co-ordinate transformation for free vibration analysis of fully incompressible materials: Y. Kohsetsu 669

An approach to verifying and debugging simulation models governed by ordinary differential equations: Part 1. Methodology for residual generation: Z. Yuan, M. L. Graham and J. A. Lennox 685

An approach to verifying and debugging simulation models governed by ordinary differential equations: Part 2. Residuals analysis and a case study: J. A. Lennox and Z. Yuan 707

Modelling topology optimization problems as linear mixed 0–1 programs: M. Stolpe and K. Svanberg 723

Volume 57 Number 6 • 14 June 2003

A new scheme for imposing a minimum length scale in topology optimization: T. A. Poulsen 741

Convergence of the fixed point theorem with random parameters: F. Poirion 761

An indirect elastodynamic boundary element method with analytic bases: S.-Y. Shen 767

Worst-case design in head impact crashworthiness optimization: K. J. Craig, N. Stander and S. Balasubramanyam 795

A comparison of modelling methods for polydispersed wet-steam flow: A. J. White 819

Symmetric-Galerkin BEM simulation of fracture with frictional contact: A.-V. Phan, J. A. L. Napier, L. J. Gray and T. Kaplan 835

Autonomous decentralized finite element method and its applications: T. Honma and N. Tosaka 853

Mixed finite element method for saturated poroelastoplastic media at large strains: X. Li, Z. Liu, R. W. Lewis and K. Suzuki 875

Volume 57 Number 7 • 21 June 2003

An *hp*-adaptive finite element method for electromagnetics. Part 3: A three-dimensional infinite element for Maxwell's equations: W. Cecot, W. Rachowicz and L. Demkowicz 899

Rate-dependent projection operators for frictional contact constraints: Y. Araki and K. D. Hjelmstad . 923

Scaled boundary finite-element analysis of a non-homogeneous elastic half-space: J. P. Doherty and A. J. Deeks 955

Boundary element analysis in thermoelasticity with and without internal cells: X.-W. Gao 975

Linearization and return mapping algorithms for elastoplasticity models: G. Asensio and C. Moreno . 991

On the construction of blending elements for local partition of unity enriched finite elements: J. Chessa, H. Wang and T. Belytschko 1015

Volume 57 Number 8 • 28 June 2003

A shell problem 'highly sensitive' to thickness changes: K. J. Bathe, D. Chapelle and P.-S. Lee 1039

Exploiting partial or complete geometrical symmetry in 3D symmetric Galerkin indirect BEM formulations: M. Bonnet 1053

Some observations on unsymmetric radial basis function collocation methods for convection–diffusion problems: J. Li and C. S. Chen 1085

On a consistent hourglass stabilization technique to treat large inelastic deformations and thermo-mechanical coupling in plane strain problems: S. Reese 1095

Algebraic elimination of slide surface constraints in implicit structural analysis: E. Chow, T. A. Manteuffel, C. Tong and B. K. Wallin 1129

Mechanically based models: Adaptive refinement for B-spline finite element: P. Kagan, A. Fischer and P. Z. Bar-Yoseph 1145

Topology optimization with implicit functions and regularization: T. Belytschko, S. P. Xiao and C. Parimi 1177

Volume 57 Number 9 • 7 July 2003

Consistent mesh tying methods for topologically distinct discretized surfaces in non-linear solid mechanics: T. A. Laursen and M. W. Heinstein 1197

3D FE implementation of an incompressible quadriphasic mixture model: R. van Loon, J. M. Huyghe, M. W. Wijlaars and F. P. T. Baaijens 1243

A suitable computational strategy for the parametric analysis of problems with multiple contact: P. A. Boucard and L. Champaney 1259

Variational multiscale methods to embed the macromechanical continuum formulation with fine-scale strain gradient theories: K. Garikipati 1283

Elastoplastic stability analysis of shells using the physically stabilized finite element *SHB8PS*: A. Legay and A. Combescure 1299

Implicit time integration for the material point method: Quantitative and algorithmic comparisons with the finite element method: J. E. Guilkey and J. A. Weiss 1323

Volume 57 Number 10 • 14 July 2003

Special Issue on Design Sensitivity and Optimization of Large-Scale Problems
Guest Editors: Michael J. Saran and Michal Kleiber

Preface 1339

Manufacturing tolerances and multiple loading conditions in structural configuration optimization: K. Dems and W. Gutkowski 1341

Preliminary design optimization of stiffened panels using approximate analysis models: L. Lamberti, S. Venkataraman, R. T. Haftka and T. F. Johnson 1351

Design sensitivity analysis and optimization for polymer sheet extrusion and mold filling processes: D. E. Smith 1381

An element removal and reintroduction strategy for the topology optimization of structures and compliant mechanisms: T. E. Burns and D. A. Tortorelli 1413

Adjoint state method for shape sensitivity analysis in non-steady forming applications: S. H. Chung, L. Fourment, J. L. Chenot and S. M. Hwang 1431

An augmented Newton method in elastic–plastic structural optimization: R. Sun and T. Hisada 1445

Adaptive algorithms for optimal control of time-dependent partial differential-algebraic equation systems: R. Serban, S. Li and L. R. Petzold 1457

Topology optimization of 2D-frame structures with path-dependent response: C. B. W. Pedersen 1471

Volume 57 Number 11 • 21 July 2003

A co-rotational grid-based model for fabric drapes: K. Y. Sze and X. H. Liu 1503

A modified element-free Galerkin method with essential boundary conditions enforced by an extended partition of unity finite element weight function: M. K. Alves and R. Rossi 1523

3D modelling of strong discontinuities in elastoplastic solids: fixed and rotating localization formulations: J. Mosler and G. Meschke 1553

Numerical techniques for the analysis of crack propagation in cohesive materials: S. Marfia and E. Sacco 1577

Dynamic stiffness vibration analysis using a high-order beam model: M. Eisenberger 1603

Trajectory-planning through interpolation by overlapping cubic arcs and cubic splines: L. J. du Plessis and J. A. Snyman 1615

Volume 57 Number 12 • 28 July 2003

Simultaneous tridiagonalization of two symmetric matrices: S. D. Garvey, F. Tisseur, M. I. Friswell, J. E. T. Penny and U. Prells 1643

Symmetric Galerkin BEM for shear deformable plates: J. J. Perez-Gavilan and M. H. Aliabadi 1661

A novel 3D mixed finite-element model for statics of angle-ply laminates: Y. M. Desai, G. S. Ramtekkar and A. H. Shah 1695

Checkerboard-free topology optimization using non-conforming finite elements: G.-W. Jang, J. H. Jeong, Y. Y. Kim, D. Sheen, C. Park and M.-N. Kim 1717

A gradientless technique for optimal distribution of piezoelectric material for structural control: A. Mukherjee and S. P. Joshi 1737

Numerical simulation of convective heat and mass transfer in banks of tubes: G. Comini and G. Croce 1755

A discontinuous Galerkin finite element method for dynamic and wave propagation problems in non-linear solids and saturated porous media: X. Li, D. Yao and R. W. Lewis 1775

Volume 57 Number 13 • 7 August 2003

A frontal solver tuned for fully coupled non-linear hygro-thermo-mechanical problems: M. Bianco, G. Bilardi, F. Pesavento, G. Pucci and B. A. Schrefler 1801

Three-dimensional theory of elasticity for free vibration analysis of composite laminates via layerwise differential quadrature modelling: J. Z. Zhang, T. Y. Ng and K. M. Liew 1819

A Galerkin BEM for transient acoustic scattering by an absorbing obstacle: T. Ha-Duong, B. Ludwig and I. Terrasse 1845

A composite transformation for numerical integration of singular integrals in the BEM: B. I. Yun 1883

Kinematic limit analysis modelling by a regularization approach and finite element method: A. Chaaba, L. Bousshine and G. De Saxce 1899

Anisotropic tetrahedral meshing via bubble packing and advancing front: S. Yamakawa and K. Shimada 1923

Volume 57 Number 14 • 14 August 2003

Back analysis of model parameters in geotechnical engineering by means of soft computing: B. Pichler, R. Lackner and H. A. Mang 1943

Development of the DYNA3D simulation code with automated fracture procedure for brick elements: A. Tabiei and J. Wu 1979

Fast direct solution of the Helmholtz equation with a perfectly matched layer or an absorbing boundary condition: E. Heikkola, T. Rossi and J. Toivanen 2007

A variant of the subspace iteration algorithm for generalized eigenproblems: S. Rajendran and K. M. Liew 2027

Discrete equivalent time integration methods for transient analysis: A. Muğan 2043

Curved quadratic triangular degenerated- and solid-shell elements for geometric non-linear analysis: C. H. Kim, K. Y. Sze and Y. H. Kim 2077

Volume 57 Number 15 • 21 August 2003

Fully-automated hex-dominant mesh generation with directionality control via packing rectangular solid cells: S. Yamakawa and K. Shimada 2099

An iterative defect-correction type meshless method for acoustics: V. Lacroix, Ph. Bouillard and P. Villon 2131

A general high-order finite element formulation for shells at large strains and finite rotations: Y. Başar, U. Hanskötter and Ch. Schwab 2147

C^n continuous modelling of smooth contact surfaces using NURBS and application to 2D problems: M. Stadler, G. A. Holzapfel and J. Korelc 2177

Computational design of swarms: T. I. Zohdi 2205

New crack-tip elements for XFEM and applications to cohesive cracks: G. Zi and T. Belytschko 2221
